### Skyline Software Systems, Inc joins Object Raku VAR program

Vancouver, BC, Canada – Object Raku Technology Inc is pleased to announce that Skyline Software Systems, Inc has joined its Vendor Authorized Reseller program. The move synchronizes Skyline’s patented and award-winning Terra Explorer Pro technology with Object Raku’s hi-resolution 3D geo-modeling package.

“Military operations in urban terrain constitute one of the most daunting challenges facing forces today”, says Mike Parlow, Director of Object Raku. “In an operational scenario, operators and analysts are under extremely tight timelines. From the time the warning order is issued, products and analyses have hours, not days, to be completed. This problem is compounded near-exponentially in an urban operation where the terrain, infrastructure and population add significant issues that cannot be ignored. Because urban operations are at their core 3D operations, portrayals of the mission information in the 3D context better enable the operators and analysts to make decisions tailored to the environment. By combining Skyline Software’s Terra Explorer suite and Object Raku’s Sextant, we create an unparalleled urban mission planning & rehearsal capability.”

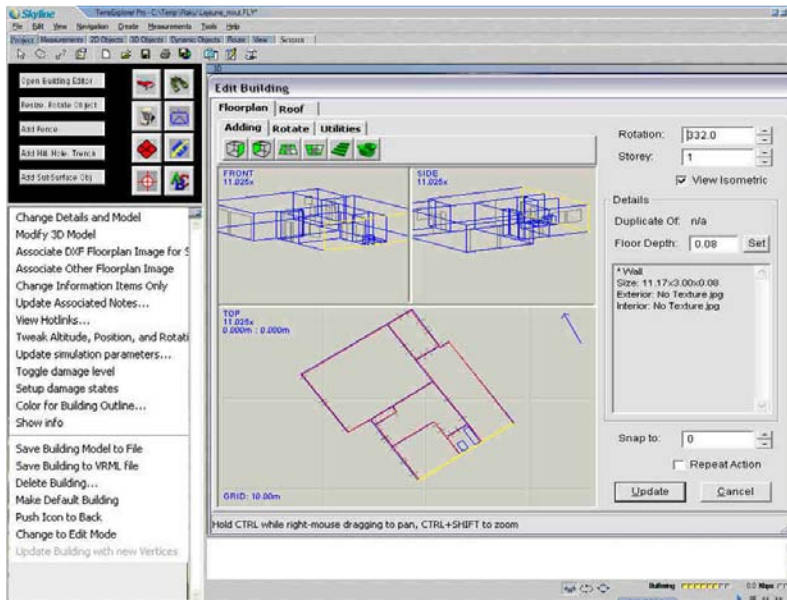

Plans are for the Sextant module in Terra Explorer Pro to be available in beta form to Skyline customers by June '06. “We are on track to complete the integration over the

next few weeks.” says Paul Collins, C.E.O. of Skyline Software Systems. “Our customers worldwide have a need for the whole picture – from the country level view right down to the individual street corner. The ability to accurately depict specific features such as street signs, lamp posts, man-hole covers, and windows in the immersive 3D mission scenario allows the analysts, planners, and operatives to weigh *all* of the relevant information in a mission-specific perspective. What we have done is to fuse the ground level and subterranean perspective of Sextant directly into Terra Explorer Pro as a native interface. This approach aims to leverage the years of mission-tested experience of

both tool kits. For seamless viewing, interaction and dissemination of the geospatial globe down to low-level fly-over, Terra Explorer is without peer. In complement to our technology, Object Raku has pioneered urban mission support to tactical operators and allows them to vividly detail and enter buildings and subterranean mission areas. It’s a perfect match.”

#####

### About Object Raku Technology Inc

Object Raku Technology Inc of Vancouver, BC is focused on the fusion of geospatial data and 3D visualization for the benefit of industry, government and military customers. Through the company’s object-oriented solutions to complex GIS challenges, remarkable breakthroughs have been achieved in the field of rapid 3D terrain generation and mission rehearsal with a special emphasis on urban operations. Object Raku’s clients include US and Canadian government agencies as well as operational units within the US Army, Marine Corps, and Navy.

### About Skyline Software Systems

Skyline Software Systems is a privately held company pursuing the realization of a "Digital Earth" that seeks to visualize our planet as never before. Founded in 1997, Skyline is re-inventing the term "interactive" as it relates to our planet. Drawing on our experience in software creation and sophisticated graphics systems, we've formed a unique collaboration with content partners to create an innovative web-based 3D visualization of the Earth.
